

# BNM - BNMS

**Pompe bronze centrifuge monobloc à brides 2900 tours/minute**

Données techniques

Exécution

Electropompes centrifuges monobloc avec accouplement direct moteur-pompe et arbre unique jusqu'à 22.00 kW, exécution pour moteurs normalisés IEC avec palier butée intégré de 30.00 à 75.00 kW (exécution stub-shaft). Corps de la pompe à volute avec aspiration axiale et orifice de refoulement radial vers le haut, avec dimensions principales et performances selon EN 733 (NFE 44111). Orifices : Brides PN 10, EN 1092-2.

Utilisations

Pour liquides propres sans particules abrasives, non agressifs pour les matériaux de la pompe (avec parties solides jusqu'à 0,2% maxi.). Pour l'approvisionnement en eau. Pour les installations de chauffage, conditionnement, refroidissement. Pour applications civiles et industrielles. Pour service incendie. Pour l'irrigation.

Limites d'utilisation

Température du liquide : de - 10°C à + 90°C. Température ambiante jusqu'à : + 40° C. Hauteur d'aspiration maxi : 7 mètres. Pression finale maximum admissible dans le corps de pompe : 10 bars. (16 bars pour BNM40/16,20; BNM50/12,16; BNM65/12,16,20,25; BNM 80/16). Service continu.

Moteur

Moteur à induction à 2 pôles, 50 Hz (n = 2900 trs/min). BNM, BNMS : triphasé 230/400 V ± 10% jusqu'à 3 kW; 400/690 V ± 10% de 4 à 75 kW. Isolation classe F. Protection IP 54 (IP 55 pour NMS). Moteur triphasé haut rendement IE3 à partir de de 0.75 kW. Exécution selon EN 60034-1; EN 60034-30-1.

Exécutions spéciales sur demande

- Autres voltages.
- Fréquence 60 Hz.
- Protection IP 55.
- Garniture mécanique spéciale.
- Garniture tresse (seulement pour exécution normale NM)
- Moteur monophasé (BNMM) jusqu'à 1.50 kW.
- Exécution monobloc antidéflagrant selon 94/9 CE (ATEX).
- Pour liquide ou ambiance avec températures plus élevées ou plus basses.
- IE4.

## Caractéristiques de construction

### HYDRAULIQUE D'AVANT-GARDE

Le dessin de la turbine et du corps ont été conçus de manière à permettre un très haut rendement ainsi qu'une très grande puissance d'aspiration.

### FLEXIBILITÉ D'UTILISATION

Pour les parties en contact avec le liquide pompé il est possible de choisir la fonte ou le bronze ce qui permet l'utilisation des pompes pour le pompage de liquides très variés.

### DESSIN COMPACT

La structure compacte permet l'installation dans des espaces réduits.

### DESSIN EXCLUSIF

Pour la sécurité des utilisateurs un nouveau dispositif de protection empêche le contact avec les parties tournantes de la pompe et permet un accès aisé à la garniture mécanique.

### FIABILITÉ

Les dimensions des roulements et de l'arbre ont été étudiées pour garantir la réduction des sollicitations mécaniques ainsi qu'une grande fiabilité dans toutes les conditions d'utilisation.

### HYDRAULIQUE D'AVANT-GARDE

Le dessin de la turbine et du corps ont été conçus de manière à permettre un très haut rendement ainsi qu'une très grande puissance d'aspiration.

### FIABILITÉ D'UTILISATION

Pour les parties en contact avec le liquide pompé il est possible de choisir la fonte ou le bronze ce qui permet l'utilisation des pompes pour le pompage de liquides très variés. Le couvercle séparé du raccordement permet un entretien aisé.

### NOUVEL ASSEMBLAGE

Les lanternes de raccordement sont équipées d'un coussinet anti-choc à la partie hydraulique qui assure l'absence de charges supplémentaires au niveau des roulements moteur. La dimension des brides permet le montage avec tout moteur standard de construction B35.

### DESSIN EXCLUSIF

Pour la sécurité des utilisateurs un nouveau dispositif de protection empêche le contact avec les parties tournantes de la pompe et permet un accès aisé à la garniture mécanique.

### ENTRETIEN AISÉ DU MOTEUR

Le coussinet anti-choc à la partie hydraulique permet le démontage aisé du moteur et en facilite l'entretien sans risques pour la partie hydraulique.
